

HATCHING

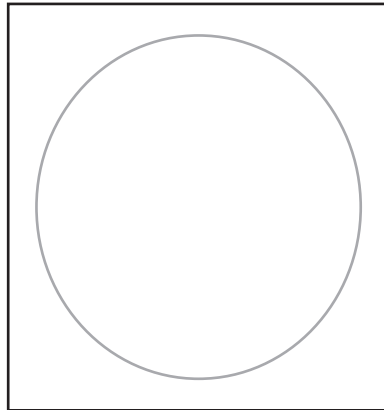

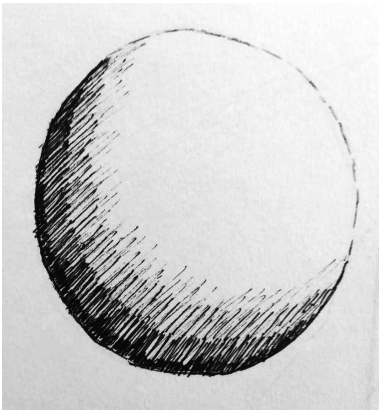

Hatching in fine art and technical drawing, is shading with closely drawn parallel lines.

1 Create a value scale using hatching. Place parallel lines close together to create dark values and farther apart to create light values.

DARK  **LIGHT**

2 Use the light guideline to recreate the sphere in the box to the right.

3 Use the light guidelines to create a cylinder with hatching.

Use the  as the light source.

*REMEMBER: Use hatching to create a contour line. Hatching uses parallel lines only (all in one direction).

4 Draw a portrait of your choice. Add a light source and fill with hatching.
